

HOTEL HOUSEKEEPING + MAINTENANCE MANAGEMENT SOFTWARE

AGen Hotel housekeeping + maintenance management software is a technological solution designed to streamline and optimize the operations of a hotel's housekeeping and maintenance department. This software incorporates a range of features with QRCode as medium that help manage tasks such as request room cleaning, additional amenities, laundry service, fixing faulty in room device, etc. By digitalizing and centralizing these processes, hotels can improve efficiency, reduce costs, and enhance guest satisfaction.

Key benefits include:

Increased efficiency: digitalized task assignments, real-time updates, and mobile access enable housekeeping and service maintenance staff to work more efficiently and effectively.

Improved communication: Centralized communication platforms facilitate clear and timely information sharing between staff members and management.

Enhanced guest satisfaction: By ensuring that rooms are cleaned to the highest standards and in a timely manner, hotels can improve guest satisfaction and loyalty.

Data-driven decision-making: Detailed reporting and analytics provide valuable insights into housekeeping performance, allowing management to make informed decisions.
