

Raw Material Sticker Label Printing

Introduction

Sticker label printing is a versatile and essential process in various industries. In a raw material warehouse, the quality and functionality of sticker labels largely depend on the raw materials used in their production. Understanding these materials is crucial for achieving the desired performance and appearance of the labels.

The primary raw materials for sticker label printing include:

1. **Sticker material:** This is the visible surface of the label, which can be made from various materials such as paper (coated paper, bond paper, thermal paper) or plastic films (PET, PVC, polypropylene). The choice of sticker material depends on the intended use of the label, such as durability, print quality, and environmental resistance
